

SHORT CV OF KIM JENKINS

Kim Jenkins is a South African Civil Engineer. He started his career as a Geotechnical Engineer, design foundations and retaining walls. After Geotech, Kim expanded his sphere of activities into Pavement Engineering. Materials engineering, including investigations, testing and designing of solutions bridged appropriately between these fields. Kim found a niche in road rehabilitation and focused on technology development in cold recycling of pavements using sustainable technologies, such as bitumen stabilisation with either foamed bitumen or emulsion. He has published widely on his research in more than 150 combined publications of books, journals and peer reviewed international and national conference papers.

Kim currently fills the research Chair in Pavement Engineering at Stellenbosch University, sponsored by SANRAL. In his tenure, more than 100 postgraduate Masters and Doctoral degrees in pavement engineering have been awarded.
