Delta-13C scale realisation based on the primary Reference Materials in the form of carbonates.

Sergey Assonov¹, Manfred Gröning¹, Ales Fajgelj¹

¹ International Atomic Energy Agency, Vienna, Austria

The presentation will address the most important aspects of delta-13C scale realisation based on primary Reference Materials (RMs) from the IAEA as following:

• Release of IAEA-603, replacement of NBS19 (info on its uncertainty, consistency of the scale realisation);
• Large uncertainty found for LSVEC (second primary RM defining the scale-span for delta-13C scale). Replacement of LSVEC is urgently needed, the steps planed.
• Metrological requirements for RMs to be used in the atmosphere monitoring.
• A range of RMs needed for optical isotopic analysers – pure CO2 gases and gas mixtures.
• Collaborations and expected results (e.g. gas mixtures planned by EMPIR project leaded by NPL).

An overview of strategic plan and developments will be given.
