INTERNATIONAL WORKSHOP ON Calcium sulfoaluminate cements

2nd Announcement

Murten, Switzerland
June 4 – 6, 2018

Online registration:
www.empa-akademie.ch/csa2018
SCOPE AND BACKGROUND
Calcium sulfoaluminate cements are receiving increasing interest as an environmentally friendly alternative to Portland cement and as they can be used to formulate mortars and concretes with special properties such as fast setting, high early strength or shrinkage-compensation. Thus in the recent years the number of publications in this field increased rapidly, and new products came on the market.

This workshop aims at exchanging state-of-the-art knowledge regarding production, hydration, properties, durability and application of calcium sulfoaluminate cements. Gathering experts from all around the world will stimulate scientific discussions and can promote national and international collaboration.

TOPICS

– Clinkering
  Raw materials, lab and industrial clinkering, mineralizers, kiln operation

– Hydration mechanisms
  Kinetics, hydrate assemblages, mineral additions, ternary binders with Portland cements, admixtures, phase stabilities, thermodynamic properties

– Properties
  Mechanical properties, volume stability (expansion, shrinkage, creep)

– Durability and sustainability
  Sulfate resistance, chloride ingress, carbonation, rebar corrosion, life cycle analysis

– Application
  Mortar, concrete, waste encapsulation, standardization

SPECIAL ISSUE
Selected papers will be published in a special issue of “Advances in Cement Research”.  
Submission: March 15 – June 15, 2018
